

Fusion drawdown: small risk relief does not offset lower growth

Drawdown comparison for the base Equity Minimum Variance fund and the sentiment-tilted extension.

Drawdown scorecard

Lower is worse

Model	Ret	Vol	Shp	DD	\$1
Base	7.0%	12.8%	0.55	-18%	1.23
Sentiment Tilt	6.2%	12.8%	0.48	-18%	1.20

Read-through

The tilt improves maximum drawdown by only 0.4%. The improvement is too small to compensate for the lower return and lower Sharpe.
